THE PROPOSED SOLUTION

BursaIQ

One workspace. An AI workforce. Governed intelligence.

BursaIQ combines Microsoft Copilot, optional open-source AI models, specialized AI workers, approved data and verifiable workflows.

WORKFORCE

My Workforce: Delegate missions, monitor agents and receive reports

KNOWLEDGE

Ask Bursa for internal knowledge base

AI ASSISTANT

General assistance, evidence and scheduled answers by email

GOVERNANCE

Verification Centre, Admin Console and audit-ready delivery

BursaIQ: The Product Experience

Six connected modules bring task execution, institutional knowledge and review into one governed platform.

01 My Workforce

AI missions, agent runs

02 Intelligence Exchange

Approved reusable insights

03 AI Assistant

Tasks, Decision Canvas

04 Ask Bursa

Internal knowledge Q&A

05 Verification Centre

Review, approve, audit

06 Admin Console

Models, prompts, RBAC

01 Mission-based workforce

My Workforce assigns specialist agents and tracks analysis, reports and deliverables.

02 Approved institutional knowledge

Ask Bursa answers internal questions; Intelligence Exchange publishes approved insights.

03 AI Assistant and email automation

AI Assistant supports work tasks, with scheduled email delivery through Decision Canvas.

04 Review, control and multichannel access

Verification Centre, Admin Console and optional Microsoft Teams agent access.

Current demo uses synthetic governed sources and a prepared offline fallback.

Target architecture: Flask APIs, mission orchestration, Copilot Studio or open-source AI models, Python analytics and Outlook email delivery.

BursaIQ — AI Workforce & Intelligence Exchange

From internal users to governed AI-generated deliverables

1 Users & Access

Different users with different roles and responsibilities

- **GCMC Analysts** — Market analysis research and insights
- **HR** — People and workforce insights
- **Securities** — Securities analysis and market surveillance
- **Finance** — Financial analysis and reporting
- **Reviewers / Approvers** — Review, approve, reject and audit content
- **Platform Admins** — Manage users, policies and platform settings
- **Simulated roles — demo, not production SSO** — Local authentication for demonstration only

2 Frontend BursaIQ Web App

Web-based platform for all internal users

Intelligence & Execution

- **Home** — Overview and quick access
- **AI Assistant** — General AI assistant
- **Ask Bursa** — Obtain knowledge Q&A
- **My Workforce** — Create missions, monitor agents
- **Collaborative Rooms** — Team discussions and shared work
- **Automation Studio** — Build and manage workflows
- **Intelligence Exchange** — Publish / share AI-generated knowledge

Governance & Follow-through

- **Action** — Track pending actions
- **Verification Centre** — Review, approve, reject, audit

Administration

- **Knowledge Administration**
- **Connectors**
- **Settings**

3 Application & API Layer

Python Fast backend with modular APIs

- **Semantic Intent Routing** — Route user queries to relevant services
- **Mission APIs** — Create, monitor, update missions
- **Agent & Capability APIs** — Manage agents and capabilities
- **Workflow Management** — Manage workflows and execution
- **Knowledge / RAG APIs** — Access internal knowledge and RAG
- **Review / Approval APIs** — Handle human review and approvals
- **Reporting APIs** — Generate reports and outputs
- **Persistent Attention Store** — Store and manage ongoing tasks

4 AI Workforce Orchestration

Coordinate missions, assign agents and manage execution

- **Mission Capability Registry** — Only allowed executors
- **Agent Registry + Versioned Teams** — Manage agent profiles and teams
- **Lifecycle / worker reconig** — Track execution and state changes

Mission Orchestrator + Capability Router

Decomposes tasks, selects appropriate agents, coordinates execution, routes state and handles failures

- **Workflow Engine + Approval Gates** — Execute workflows with human gates
- **Governance - Evidence / Audit** — Track evidence, logs and audit trail

Specialist AI Workers / Agents

- Mission Manager
- Report Agent
- Data Agent
- Research Agent
- Analysis Agent
- Workflow Agent
- Liquidity Agent
- Writer Agent
- Insight Agent
- Knowledge Agent

Model Providers

- **Local Ollama / Qwen 2.5 3B**
- **Microsoft Copilot Studio / Direct Line**
- **nomic-embed-text embedding**

5 Execution and Tools

Tools and services used by AI workers

- **Data Analysis** — Structured analytics and insights
- **Quantitative Analytics** — Market and statistical analysis
- **Deterministic Python/runtime** — Reproducible and auditable tools
- **PDF Reports & Charts** — Generate reports with charts
- **Workflow Builder** — Trigger → Build → If → Condition → Approval → Report → Publish
- **Document Ingestion / RAG** — Ingest documents and build knowledge base
- **Local File Analysis** — Analyze local files and data

6 Data & Knowledge Layer

Data, documents, knowledge and outputs

- **SQLite** — Missions, agents, teams, workflows, rooms, approvals, assets, audit
- **Synthetic market data CSV** — Sample market data used for analysis
- **Role-filtered knowledge / documents** — Internal documents with role-based access
- **Embedding chunks & source citations** — Vector embeddings, with source references
- **Generated PDF deliverables** — Reports and charts generated by agents
- **Room decisions and resuable exchange assets** — Approved insights and reusable knowledge assets

7 Connectivity & Boundaries

Integration services and external data sources

- **Local Flask + SQLite demo** — Runs locally for development and demonstration
- **Qwen locally OR configured Copilot Studio** — Use local Ollama, Qs, Qwen 2.5 3B or configured Microsoft Copilot Studio
- External enterprise connectors NOT YET CONNECTED (requests recorded only)
- No production market feeds or production SSO

Mission Flow

(From question to knowledge)

1. **Request** — Task or information request
2. **Live semantic routing** — Classify and route
3. **Registered mission / team** — Decompose Ollama OR with roized Microsoft Copilot Studio
4. **Governed analysis** — Human review (if required) requires and audit trail
5. **Human verification** — Approve / refiine
6. **Versioned exchange publication** — Publish and share
7. **Reuse as new mission** or production SSO

Six modules. One governed workforce experience.

From AI missions and internal Q&A to approved intelligence, scheduled delivery and accountable review.

WORKFORCE — MISSIONS

My Workforce

Create missions, assign AI workers, monitor progress and download finished reports.

INTELLIGENCE — KNOWLEDGE

Intelligence Exchange

Publish verified findings and retrieve reusable organisational insights.

INTELLIGENCE — KNOWLEDGE

Ask Bursa

Internal knowledge Q&A grounded in approved Bursa sources and access controls.

ASSISTANT — ANALYSIS

AI Assistant

Work assistant with Decision Canvas and recurring Automation by Email.

GOVERNANCE — ACTION

Verification Centre

Review, approve, reject and audit AI-generated outputs before reuse.

GOVERNANCE

Admin Console

Manage users, roles, prompts, knowledge access and approved AI models.

Optional Microsoft Teams access for AI Assistant and Ask Bursa; Copilot Studio and local open-source AI models routing; Scheduled email via Microsoft Graph.

BursaIQ connects the gaps between chat and BI

AI workforce execution, internal knowledge, governed evidence and scheduled delivery converge in one exchange-specific platform.

	Traditional AI Chatbots	Business Intelligence Tools	BursaIQ
Conversational access	✕ Generic conversation	⚠ Dashboard or SQL navigation	✓ **AI Assistant / Ask Bursa in Web & Teams**
Evidence and metrics	✕ Narrative without local proof	✕ Evidence separate from conversation	✓ **Governed metrics and traceable evidence**
Role boundaries	✓ Provider-dependent controls	✕ No cross-workspace policy layer	✓ **RBAC, policy gateway and review roles**
After-answer workflow	⚠ Usually ends at the answer	✓ Alerts and export outside chat	✓ **AI missions, email automation and approval**
Executive output	✕ Manual briefing	⚠ Manual dashboard export	✓ **Worker-generated reports and verified PDF**
Demo resilience	✕ Online service dependency	✕ Data stack dependency	✓ **Copilot or local models with fallback**

BursaIQ connects AI workers, hybrid model options, deterministic analysis and verified delivery.
