THE PROPOSED SOLUTION

BursaIQ

One workspace. A hybrid AI workforce. Governed intelligence.

BursaIQ combines Microsoft AI services with self-hosted open-source models, specialist AI workers, trusted knowledge and human oversight.

HYBRID AI

Microsoft services and local open-source models in one workspace

AI WORKFORCE

Specialist agents for knowledge, analysis and delivery

GOVERNED KNOWLEDGE

Trusted internal sources and reusable intelligence

HUMAN CONTROL

Verification, approvals and audit-ready delivery

BursaIQ: The Product Experience

BursaIQ presents one governed AI workforce powered by two complementary model paths.

01 My Workforce

AI missions and specialist workers

02 Intelligence Exchange

Approved insights and reuse

03 AI Assistant

Everyday support and insight

04 Ask Bursa

Trusted internal knowledge

05 Verification Centre

Human review and approval

06 Administration

Models, access and governance

01 Hybrid model choice

Select Microsoft or local open-source AI according to the work, policy and operating context.

02 One AI workforce experience

Users work with specialist agents without managing separate tools or model interfaces.

03 Trusted knowledge and evidence

Answers and deliverables remain grounded in approved knowledge and traceable sources.

04 Human oversight and reuse

People review important outputs before the organisation publishes or reuses them.

Microsoft providers support connected enterprise experiences; self-hosted models provide local control and choice.

Proposed architecture: a shared BursaIQ governance layer across Microsoft AI services and self-hosted open-source models, with one experience for users and reviewers.

BursaIQ — Hybrid AI Workforce

One governed experience across Microsoft AI services and self-hosted open-source models

1 USERS
Employees, analysts, reviewers

Internal teams
Research, operations, technology and support functions

Reviewers
Validate, approve and refine outputs

Administrators
Set access, models and policies

Proposal scope
Hybrid model strategy

2 EXPERIENCE
One BursaIQ workspace for every model path

AI Assistant
Conversational support

Ask Bursa
Trusted knowledge

My Workforce
Specialist AI workers

Intelligence Exchange
Approved reuse

Verification & Admin
Human control

3 BURSAIQ CORE
Orchestration governance and routing

BursaIQ Orchestration & Governance

- Intent & workload routing
- AI workforce coordination
- Knowledge & evidence
- Policy, approval & audit

4 HYBRID AI
Choose the model path that fits the work

MICROSOFT AI ECOSYSTEM

Connected enterprise experiences

Microsoft Copilot providers and services

Enterprise channels, identity and connected workflows

Best suited to managed and connected enterprise use cases

SELF-HOSTED OPEN-SOURCE AI

Local control and deployment choice

Open-source language and embedding models

Self-hosted inference within a controlled environment

Best suited to local processing and greater model control

5 TRUST LAYER
Common controls

Approved data & knowledge · **Role-based access** · **Human verification** · **Audit & reusable intelligence**

One experience. Two model paths. One governance layer.

One platform. Two model paths. One governance layer.

BursaIQ gives users a consistent AI workforce experience while the organisation chooses the right provider for each context.

WORKFORCE — MISSIONS

My Workforce

Coordinate specialist AI workers across Microsoft and local model paths.

INTELLIGENCE — KNOWLEDGE

Intelligence Exchange

Publish approved insights and reuse them with clear provenance.

INTELLIGENCE — KNOWLEDGE

Ask Bursa

Answer internal questions from trusted knowledge and access controls.

ASSISTANT — MODEL CHOICE

AI Assistant

Support everyday work through the model path that best fits the request.

GOVERNANCE — GOVERNANCE

Verification Centre

Keep people responsible for review, refinement and approval.

GOVERNANCE

Administration

Set model availability, access policies and approved knowledge.

Microsoft services provide connected enterprise experiences; self-hosted open-source AI models provide local control. BursaIQ applies the same governance across both.

BursaIQ combines provider choice with consistent control

Microsoft AI services and self-hosted open-source models operate as complementary options inside one governed workspace.

	Microsoft AI Services	Self-hosted Open Source	BursaIQ Governance
Best fit	✓ Connected enterprise experiences	✓ Local and controlled processing	✓ **Routes work by context and policy**
Deployment choice	✓ Managed Microsoft ecosystem	✓ Bursa-controlled environment	✓ **One consistent user experience**
Knowledge	✓ Approved enterprise sources	✓ Approved local sources	✓ **Common source and evidence controls**
Oversight	✓ Enterprise identity and channels	✓ Local model and data control	✓ **Human review and audit**
Continuity	✓ Configured Microsoft availability	✓ Independent local model option	✓ **Visible provider status and choice**
Strategic role	✓ Connected cloud capability	✓ Control over selected workloads	✓ **A shared governance layer across both paths**

The proposal supports a hybrid model strategy without splitting the user experience or governance model.
